Standard of NICE3000 electric principle diagram:

1. Power line naming rules:

The 3-phase 5 wires of the 380V power which located on the preamp of the main air circuit breaker are named R,S,T,N and PE.

The one of the 220v illumination power which located on the preamp of the power cabinet air breaker is named Xa,Xb, the one on the backward stage named 501,502.

The control transformer primary named with the R,S,T rule, the secondary name designation of the control transformer: AC220V is 201, 202, DC110V is L⁺, L⁻.

The output side of 24V power supply connect to 301,302.

2. Named designation rule of wire number:

101-199 relevant circuit of AC110V;

201-299 relevant circuit of AC220V;

501-599 relevant circuit of AC220V car illumination power;

601-610 relevant circuit of AC36V;

801-810 Hoistway lighting circuit of AC220V;

3. Switch and contact rules:

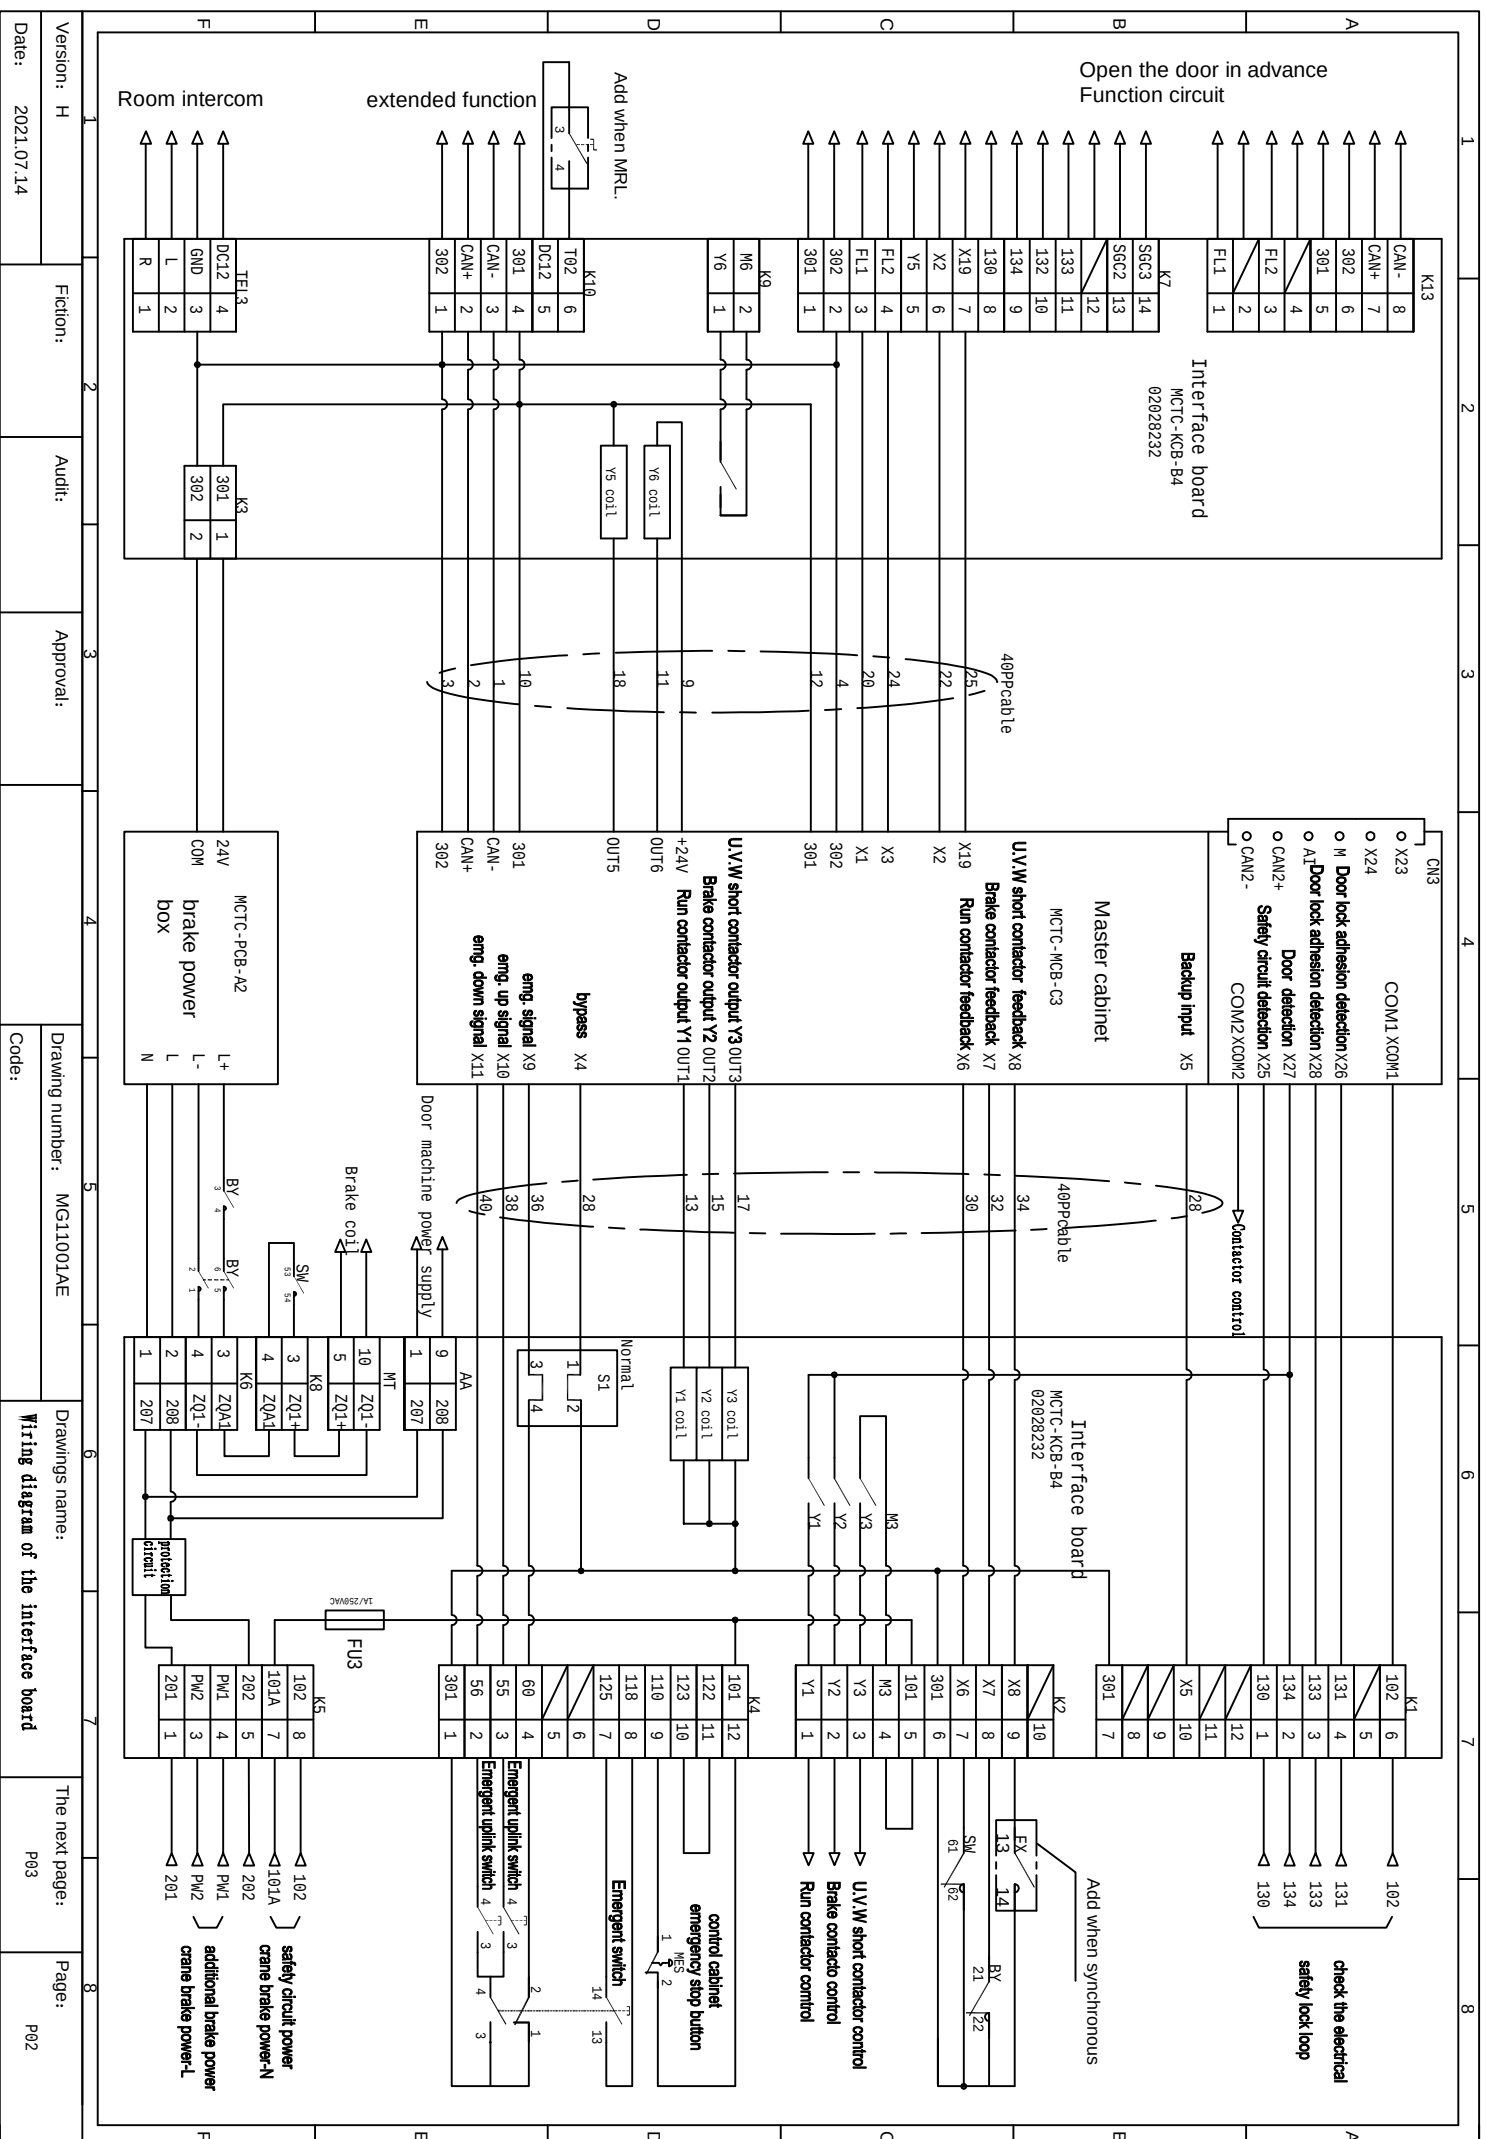

All the switch , relays, and contactor are subject to the rule of UP-ON, Down-OFF, Left-ON and Right-OFF .

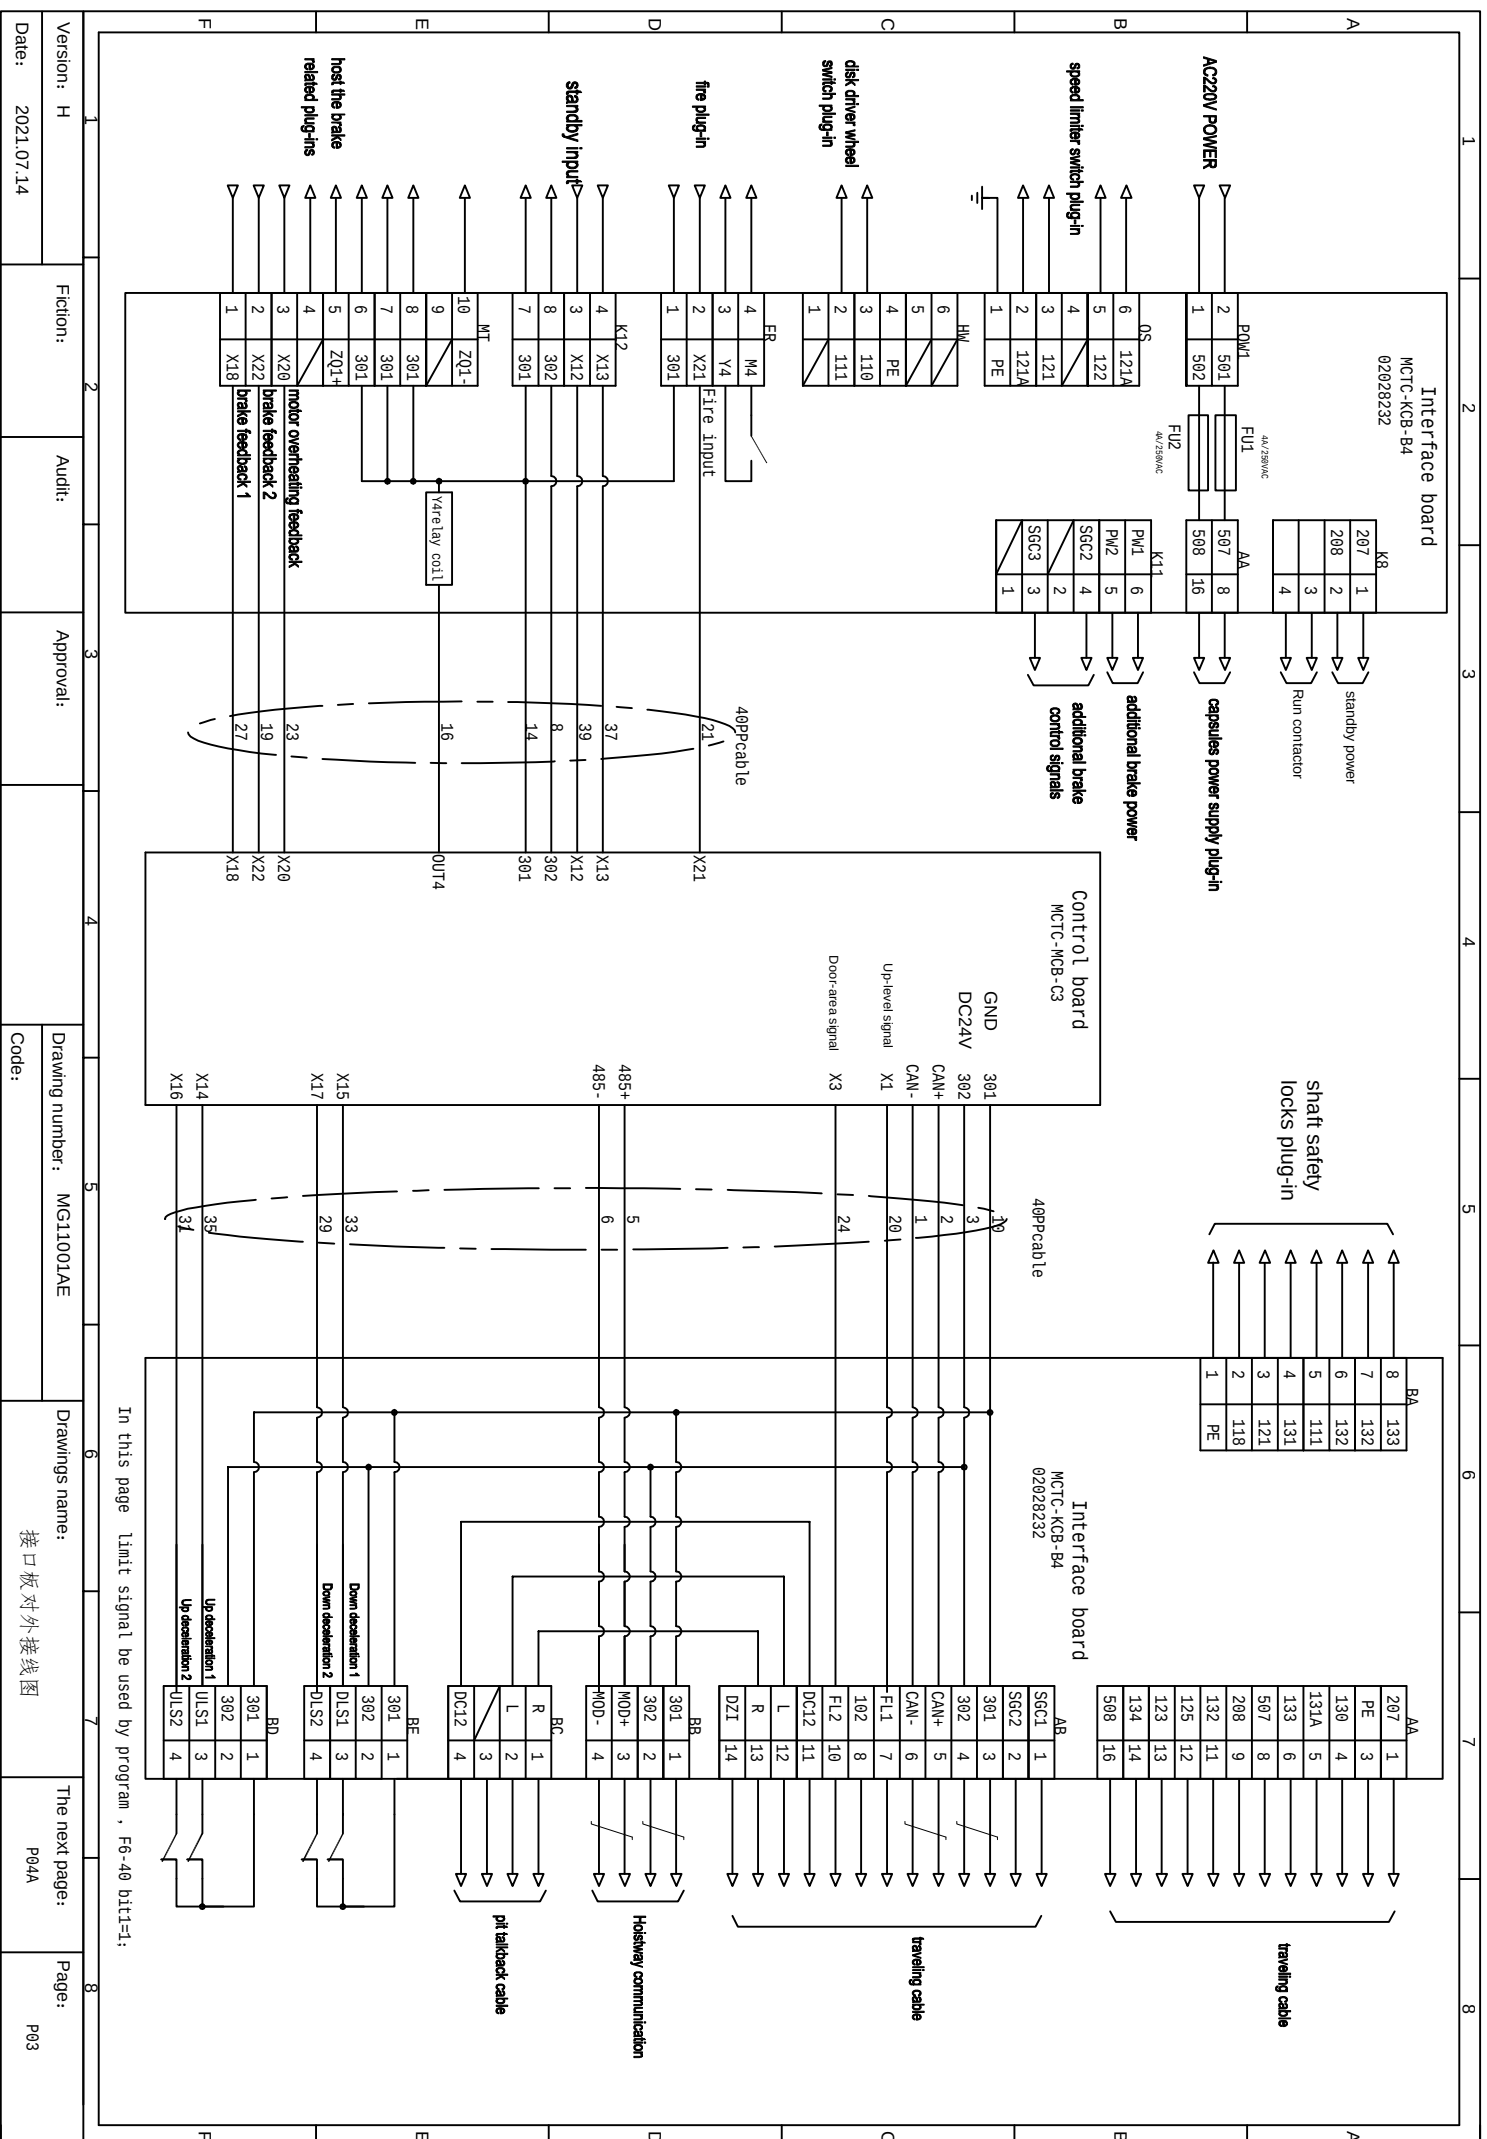

4. The schematic diagram applies to the modular control cabinet of our company.

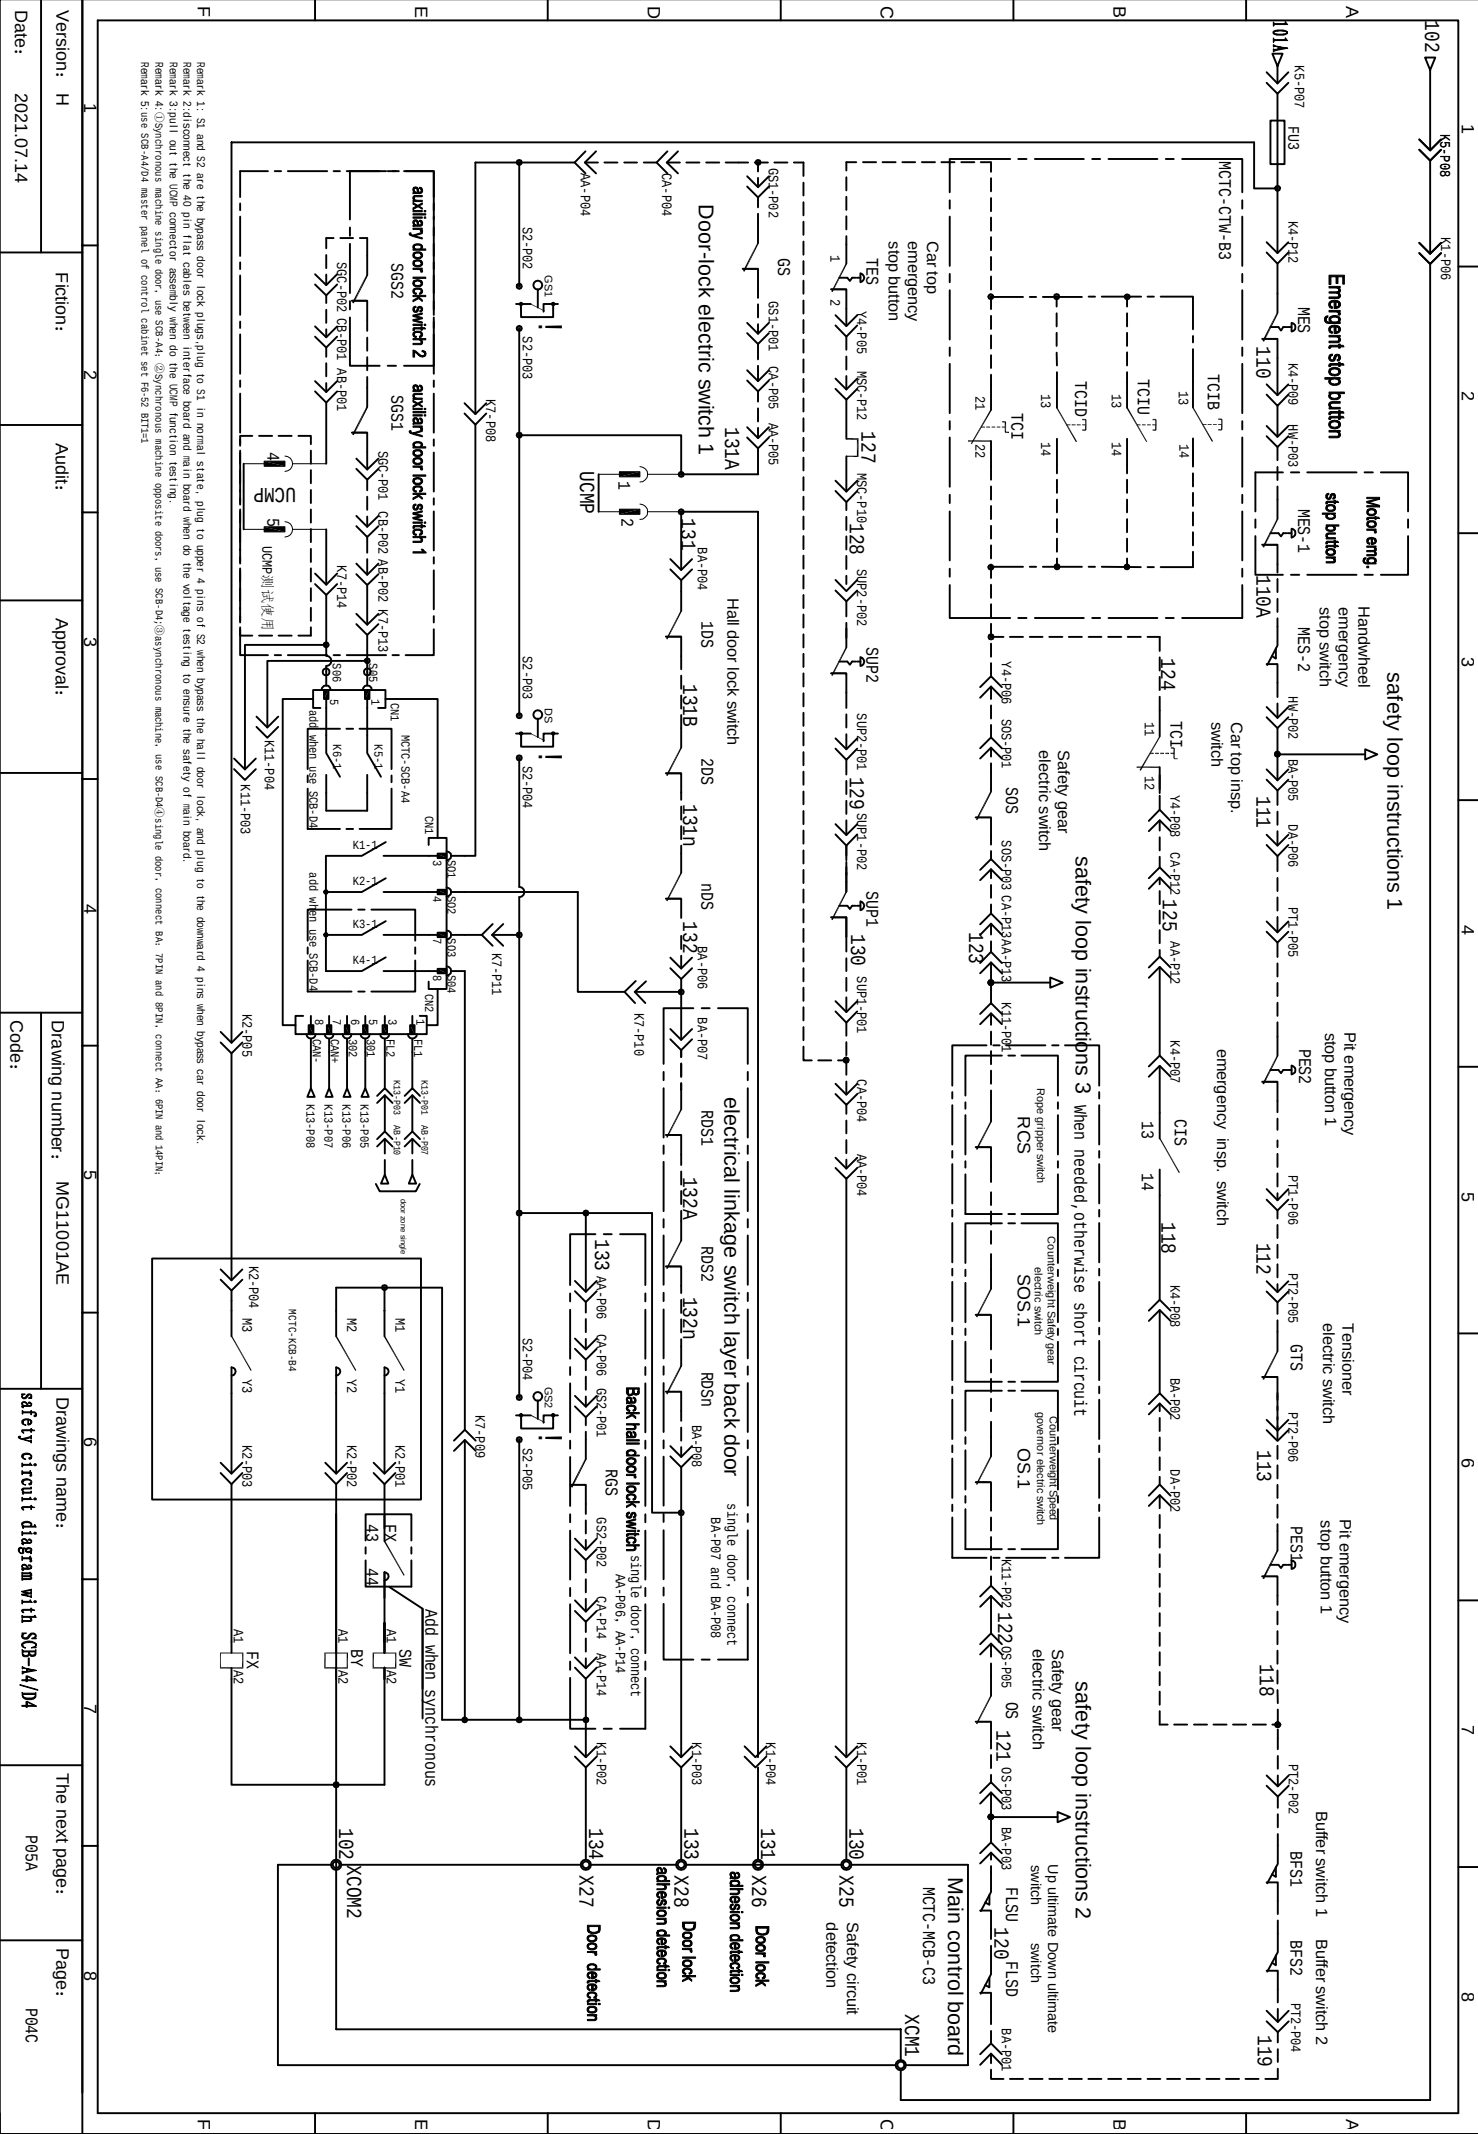

5. Test scope of drawing:

Synchronous and asynchronous control cabinet, asynchronous machine does not need to add "synchronous machine" when adding components and related lines.

Remark 1: This circuit applies to MR.
Remark 2: Control cabinet brake voltage according to customer orders allocation.
Remarks: no voltage reduction function when the J3 of MCTC-PCB-A2 ON, J2 invalid, when no J3 short, J2 voltage reduction, when the voltage reduction activate CN2 will output DC110V.
